Review Manager for Cost-Efficient Post-Evaluation and Processing

Review inspected rolls and make the most out of the production

The Review Manager of Dr. Schenk uses the inspection data gathered online with the EasyInspect system to analyze and correct inspected material in postprocessing on a rewinder. Using the defect data from the SQL database in the PHC allows operators to review individual defects based on their own search criteria. The requalification of the rolls is cost-efficient and time saving as defects can be reviewed and repaired, cut or reclassified.

Intelligent Dr. Schenk interfaces to all common communication protocols enable an easy integration of the Review Manager into rewinders/slitters in order to optimize the qualification process and also help to further analyze potential for process optimization.

Search specified defects in the roll and review them

Statistical roll evaluation
YOUR BENEFITS

Optimal defect review
- Reliable and quick retrieval of each selected defect
- Easy and fast re-evaluation through operator
- Opportunity for reclassifying or repairing

Competitive advantage
- Quality improvement through combined state-of-the-art inline and offline control
- Optimal yield through cutting optimization
- Higher customer satisfaction

Cost savings with superior technology
- Powerful SQL database for fast access to roll data via PHC
- Support for all common communication protocols
- Report generation for documentation of quality

Defect list report for a roll

About Dr. Schenk
Dr. Schenk GmbH offers inspection and measurement solutions for automated quality assurance and production process control - a key success factor in the making/converting of plastics, textile materials, nonwovens, paper, metal, or glass, for a multitude of markets like display glass, automotive, packaging, medical, renewable energy, and many more. From modular standard units to highly customized systems – Dr. Schenk’s solutions have precision in focus!
